 - Used for editing scorecard attributes, players and courses
 - Must not be deleted or renamed!
- Printing Worksheets** (Green buttons)
 - PRT S A4
 - PRT S2p A4
 - PRT S LTR
 - PRT S2p LTR
 - Used for printing scorecards with preset formats
 - You can rename Worksheets or delete ones that are not being used
- Miscellaneous Worksheets** (Orange buttons)
 - Batch
 - Back side A4
 - Back side LTR
 - Prize Sheet
 - Worksheets with supporting functions
 - You can delete Worksheets that are not being used

IMPORTANT: Copy & Paste Functions

MakeGolfScorecard is using lots of formulas and cell formatting. Overwriting that information may cause tool to not operate properly.

There is really no need to use Copy and Paste function in MakeGolfScorecard. All data can be entered manually or there are built in functions to transfer single or blocks of data.

If you decide on using Copy and Paste anyway, try to use it carefully and you must always use **Paste values only** or **Keep Destination Formatting** options while pasting your data.

Despite the fact that the default Paste function has been preset to paste values only. There are slight differences depending on the computer platform being used to run Excel.

PC Windows

For users running Excel on PC Windows the paste function is now automatically set to Paste values only. You can use standard Ctrl+C and Ctrl+V if needed.

Apple Mac

For users running Excel on Apple Mac the function is set to Control C (Ctrl+C) and Control V (Ctrl+V).

DO NOT use Command C and Command V shortcuts in Excel running on Apple Mac .

Course selection

Tees that will show each row

Default playing tees

On this worksheet you can select course, tees showing on scorecards, default playing tees and edit all scorecard's fields that will be used on all scorecards. You can also preview and browse through your flights from **PREVIEW FLIGHT Submenu**.

Event, Comment 1 and **Comment 2** lines are text fields used to personalize your scorecard.

Date doesn't require any standardized date format entry, but as a regular text field will simply copy the field to scorecards.

Playing HCP and **Alt. Tees Playing HCP** sets what percentage of player's playing handicap will be used on scorecard. 100% HCP equals to full playing handicap as determined by player's handicap and golf course slope and index rating for selected playing tees. Each player can have selected individual playing tees and option of two different fractional HCP adjustments.

Player's source pop up determines the source of players for scorecards. There are two options – **Group** is being used to feed players from **Group Worksheet** or the other option is to use players from **Batch Worksheet**.

Custom Scoreline 1 and **Custom Scoreline 2** if entered overwrites default scoreline titles.

Scoreline 1 Holes give you an option to assign in row Scoreline 1 unique annotations to each hole

PREVIEW FLIGHT Submenu shows which flight is currently populating the scorecard and buttons First Flight, Up and Down will browse through your set of flights.

Red and Yellow Background Check Boxes will highlight selected holes with two different background colors. Can be used for highlighting specific holes for different game formats.

PLAY Table shows all players in flights as will be printed on scorecards. Players can be also entered here manually in case there is no need to keep players for future games in **POOL Table**. Players' tee allocation and handicap adjustments can be modified here as well.

PLAY TABLE

Number of Players playing in Flights 16

Flight	Player	HCP	Tees	%HCP	Playing
1	Don Bayron	4,9	Black	70%	9
	Jeff Hanson	5	Default-Gold	70%	8
	Frank Puntney	7	Default-Gold	70%	9

Lock tee and HCP % selection

Red background highlights players with duplicate entries

Each Tees cell is clickable to scroll through all available tees for each player

Each %HCP cell is clickable to switch between default and optional handicap adjustments for each player

Playing Handicap column shows the exact playing handicap as calculated from player's handicap, %HCP fractional adjustment and course slope/index rating for selected course and tees.

HCP column is the entry for each player's handicap.

Tees column shows designated tees for each player. If set to Default, tees will be automatically assigned based on selected Default tees. In order to change playing tees for a player, sequential clicking at Tees cell will scroll through all available tees for selected course.

%HCP column shows each player's HCP adjustment. Clicking at %HCP cell will switch between default fractional handicap adjustment and the optional fractional adjustment as set at Scorecard sheet.

Lock tee and %HCP selection Checkbox will make tee and %HCP selection unavailable.

USGA Rules for Handicap Competitions states that player with the lowest Playing Handicap play at scratch (Playing HCP 0) in match play.

By stroking off the low ball, the higher handicap player(s) receive their handicap strokes on the holes where they need them most – resulting in more holes tied compared to holes won or lost. If players used full Playing Handicaps in match play, the better player would have the advantage on the more difficult holes (because he or she would also be getting strokes) and the other player(s) would have an advantage on the easier holes.

Playing HCP Game Format drop down option selection

- **Use Playing HCP**
 - Used for regular games without any playing HCP adjustments to low HCP.
- **Stroking off low 4 players**
 - All players in each flight are stroking off the lowest player’s HCP of that flight. Simply the lowest HCP of the flight is subtracted from all players in that flight to have the player with the lowest HCP playing at scratch.
- **Stroking off low 2 players**
 - Each flight is divided in two twosomes of player a+b and player c+d. Players in each twosome are stroking off the lower player’s HCP. Simply one player in each twosome will play at scratch.
- **Stroking off low all field**
 - All players are stroking off the lowest player’s HCP of the whole field. This format is used mostly in special team games where it’s desired to have all handicaps adjusted by the lowest HCP.

Stroking of low 4 players

Following example Flight 1 represents HCP adjustments for 2-person teams match play. Players a1 and b1 are playing a Four Ball match with players c1 and d1. Player b1 has the lowest HCP. Using the **Stroking off low 4 players** option will adjust handicaps of all four players with player b1 playing at scratch.

Flight 2 represents HCP adjustments for singles match play when one scorecard for each match is desired. Player a2 is playing a match with player c2. Positions b2 and d2 are left empty. Applying the **Stroking off low 4 players** option will adjust handicap of only two entered players and player a2 will be playing at scratch since has the lower HCP.

Team B Points																							

Scoring points for each team row title populated from **Custom Scoreline** or points for Player A and Player B in singles match if one scorecard per match is desired

Stroking of low 2 players

Each Flight now actually represents two independent twosomes playing singles matches. There is one match between player a and b and another match between player c and d. Using the **Stroking off low 2 players** option will adjust handicaps of each twosome based on their lower HCP player. The lower HCP player will be playing at scratch.

Clear PLAY TABLE

Sub Batch 2

Batch worksheet can be used to enter up to 144 players to populate your scorecards.

Player's Source must be switched to Batch in **Scorecard Worksheet** in order to feed players to scorecards from this source!

Enter or paste all your players to **BATCH TABLE**. The counter on top shows total number currently entered players.

For entering Tee selection use row number from Course table or 0/Empty for default Tee selection. Handicap fraction %HCP with value 0 or Empty is

All players from **BATCH TABLE** will be automatically copied to **PLAY TABLE** in sub batches of 24 players to fill scorecards. These sub batches are selected by pull down selection. The currently selected sub batch will be outlined in **BATCH TABLE** and will be copied to **PLAY TABLE**. In order to print all players from your batch select sequentially all sub batches, print each sub batch individually and keep repeating until you cover all players.
